

Dear Sirs and Madames,

below we would like to inform you about our new developments in the area of **swing clamps**.

In addition to the development of the new **INOSOL swing clamp**, at the end of last year, we also focused on **special swing clamps**. That is also why we took the opportunity to carry out our urgently needed **catalog update**.

Inosol-Swing Clamp, up to 250 bar, DA

This swing clamp is based on an actuation concept that deviates from the standard. The cylinder is pressurized inside the pull rod. As a result, massive dimensions of the moving parts were realized in a small installation space, which in turn means less bending of these components. In addition, external damage to the pull rod would not directly impair functionality and leakage.

This type includes 3 different mounting opportunities.

More Swing Clamps

As well, at the end of last year, within our range, the focus was also on the production of special swing clamps. For example: *Pneumatically operated from stainless steel with position detection, standard clamps with special stroke, special compact clamps and standard clamps with special swivel angle ...*

New Catalog

As mentioned before, we have made an urgently needed catalog update. If you click on the image beside, you will be taken to the download page.

Current status: KEN11 / 01-2020

Of course, we are happy to design and realize your special solutions.

PRODUCT - QUICK SELECTION

CONNECTING
Coupling
Elements
Coupling Units

BLEEDING
As a plug type
or with hose
connection.

CLAMPING
Swing Clamps,
Lever Clamps,
Work Supports

VALVES
Sequence and
Holding Valves
Mini-Valves

DISTRIBUTOR
Multi Port- or
Single Port
Rotary Unions

BOOSTERS
Hydropneumatic
Pumps and
Intensifiers
